

B 使用光谱滤波的声音定位

Diagram illustrating sound localization using spectral filtering. A central figure of a person is surrounded by a circular array of speakers. Each speaker is associated with a spectral plot showing amplitude (分贝) versus frequency (千赫兹). The plots are numbered from 0 to 120 in increments of 20. A vertical double-headed arrow on the right indicates the '垂直面' (vertical plane). A yellow highlight is on the 140-degree plot, and a blue highlight is on the -60-degree plot.
